The cohort of biopolymers verified within such a sample is then viewed with reference to their ability to evidence at least one particular disease state, thereby enabling a diagnostician to gain the ability to characterise either the presence or absence of a disease state relative to recognition of the presence and/or absence of the biopolymer. Diagnostic assay kits including the present biopolymer marker are claimed, and a process for regulating a disease state by controlling the presence or absence of the biopolymer marker is
                                                                                                                                                                                                                                                                                                                                                 diabetes; kluney ... stroke; C3f; complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in indicating at least one particular disease state. The marker is a C3f fragment from the complement system having a mol.wt. of about 1690 Da. The marker is indicative of an individual suffering from myocardial infarction, intracerebral haemorrhage or congestive heart failure. The invention involves the use of a combination of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               patients before they suffer an irreversible event such as diabetes, kidney failure and heart failure, and enable effective disease management and preventative medicine. Additionally, the specific diagnostic tests which evolve using the biopolymer provide a tool for rapidly and accurately diagnosing acute Syndrome X such as heart attack and stroke, and facilitate treatment. The sequence presented is the congestive heart failure specific C3f fragment from the complement system, which has a molecular weight of about 1793 Daltons, marker bioploymer.
                                                       least one particular disease state. (I) is useful for indicating a disease state, in particular type II diabetes. The marker sequences are useful as antigens in immunoassays for the detection of those individual suffering from the disease known to be evidenced by the marker sequence. (I) provides an efficient diagnostic tool for rapidly and accurately diagnosing disease states such as type II diabetes. This is the amino acid sequence of a biopolymer marker.
                                                                                                                                                                                                                                                                                                                                                                                                                          Biopolymer marker useful in indicating disease state, in particular type II diabetes and as antigens in immunoassays for detecting individuals suffering from disease known to be evidenced by marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention discloses a biopolymer marker which is useful in indicate at least one particular disease state, particularly congestive heart failure. The polymer marker is also useful for characterising disease states. The polymer marker allows physicians to identify asymptomatic states. The polymer marker allows physicians to identify asymptomatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disease specific biopolymer marker #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                        The invention describes a biopolymer marker (I) useful in indicating
                                                                                                                                                                                                                                                                                                                                   Claim 1; Page

The marker is characterised as a C3f fragment from the complement system having a molecular weight of about 2056 daltons. The biopolymer marker identified is useful for evidencing, categorizing or regulating at least one disease state, preferably congestive heart failure.
Biopolymer marker; type II diabetes; immunoassay.

(I) is useful for indicating a disease state, in particular type II diabetes. The marker sequences are useful as antigens in immunoassays for the detection of those individual suffering from the disease known to be evidenced by the marker sequence. (I) provides an efficient diagnostic tool for rapidly and accurately diagnosing disease states such as type II diabetes. This is the

RESULT 7
AAW34623
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polymcleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polymucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC forms a down-regulation resistant C3 convertase. (A), their variants, cc fragments and conjugates are used to deplete levels of complement cc pathway proteins (by superactivation until one or more components are cc exhausted), specifically to prevent rejection of foreign material cc (particularly a xenograft) but also to prevent complement mediated cd diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous cc virus, infected cell or tumour, to increase sensitivity to complement protein conversion and deposition at a specific site (e.g. a cc virus, infected cell or tumour, to increase sensitivity to complement endiated responses; a particular application; Also contemplated is ex vivo treatment, especially by passing blood through a cc contemplated is ex vivo treatment, especially by passing blood through a cc and other inflammatory mediators) or killing of leukaemia cells or contemplated by factor I, it can bind repeatedly to factor B (which is then consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                Matches

07-JUN-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                   (particularly a xenograft) but also to prevent complement mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous virus, infected conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
Human; C3 protein; convertase; complement pathway protein; infection; down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A) their variants, fragments and conjugates are used to deplate levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material contents to prevent rejection of section material
                                                                      Human C3 protein mutant FR-2.
                                                                                                          09-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           04-MAR-1997;

This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement c2 pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated c1 exhausted), specifically to prevent complement-mediated c2 complement protein conversion and deposition at a specific site (e.g. a c2 complement protein conversion and deposition at a specific site (e.g. a c2 complement-mediated responses; a particular application; Also C2 complement-mediated responses; a particular application; Also C3 contemplated is ex vivo treatment, especially by passing blood through a c2 contemplated is ex vivo treatment, especially by passing blood through a c3 contemplated is ex vivo treatment, especially by passing blood through a c2 contemplated by phocytes in extracted bone marrow. Since (A) is not c1 inhibited by factor I, it can bind repeatedly to factor B (which is then c1 can sumption of factor B. c2 consumption of factor B.
                                                                                                                                                 Query Match

C3 is a complement pathway protein that is complement colleavage by Factor I and is also susceptible to the inhibitory action of Factor H. Mutants of C3 (AAR94029 and AAR94030) have been produced by site-directed mutagenesis. These mutants can be

                                                                                                                                                                                                 A modified human C3 protein (AAR94029) differs from the wild-type (AAR94028) by substitution of Arg-1303 by glutamic acid, glycine or glutamine. It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAT17738). The modification results in improved resistance to cleavage by Factor I in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (AAR94028) by substitution of Asp-Glu-Asp at positions 752-754 igly-Ser-Gly. It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAR17738). The modification reduces the interaction of C3b/C3i with Factor H in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to super-active the complement system or the increase a target's (e.g. tumour, pathogen or virus-infected cell) sensitivity to complement-mediated destruction.

complement-mediated

response; MHC-mismatched lymphocyte; mutein

```
CC This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC (mismatched lymphocytes in extracted bone marrow. Since (A) is not inactivated), causing inactivation of the alternative pathway by CC consumption of factor B.

This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated lymphocytes in extracted bone marrow. Since (A) is not CC inhibited by factor I, it can bind repeatedly to factor B (which is then CC consumption of factor B.
